

Appendix

Table 1. Age- and sex- specific population and number of individuals with type 2 diabetes in Hong Kong in 2019

Age group (years)	Men			Women		
	Hong Kong population	Number of individuals with diabetes	Prevalence of diabetes (%)	Hong Kong population	Number of individuals with diabetes	Prevalence of diabetes (%)
20-24	195,600	505	0.3	202,200	516	0.3
25-29	224,600	851	0.4	265,500	883	0.3
30-34	230,100	1,583	0.7	325,600	1,740	0.5
35-39	240,300	3,227	1.3	369,200	3,261	0.9
40-44	231,900	6,671	2.9	340,800	5,645	1.7
45-49	246,100	12,926	5.3	346,800	9,985	2.9
50-54	258,100	21,597	8.4	331,700	17,459	5.3
55-59	305,300	39,706	13.0	347,000	33,302	9.6
60-64	287,000	52,544	18.3	298,500	44,879	15.0
Total	2,219,000	139,610	6.3	2,827,300	117,670	4.2

Figure 1. Age- and sex-specific total and per person PALYs and GDP loss with 95% CIs in individuals with type 2 diabetes, simulated from life table modelling

The calculation of PALYs was subject to an annual discount rate of 3%. (A) Total PALYs lost; (B) total GDP lost (billions of USD); (C) PALY loss per person; (D) GDP loss per person (thousands of USD).

Age- and sex-specific total and per person PALYs and GDP loss with 95% CIs in individuals with type 2 diabetes simulated from life table modelling

The calculation of PALYs was subject to an annual discount rate of 3%.
